## ABOUT US

We have been providing the KehrMuli, a push broom attachment for forklifts, telehandlers, compact loaders, wheeled loaders, tractors, Hoftrac, Teletrac, vehicles with Euro loader mounts, bale or recycling clamp mounts, three-point mounts, direct mounts and other mounts, for many years.

As a manufacturer of push brooms right from the beginning, we have quickly established ourselves as a quality and brand manufacturer. A wealth of innovations, systematic sweeping tests and specific developments have allowed us to gain a head start with eight property rights (small patents), a European design protection and two registered trademarks.

All parts of the KehrMuli are made in Germany. This means we supply only the highest quality made in Germany.

## BEST BRUSHING AND SWEEPING RESULTS

- Optimisation of shape, weight and bristle spacing
- Individually tailored bristles and bristle combinations, taking into account areas of application and the surface
- Optimisation of bristle shape, bristle cross section and bristle hardness (exclusive to KehrMuli)
- Tailor-made mounts for all carrier vehicles guarantee a firm hold as well as easy handling
- Constant pressure points on the bristles provide a firm hold on the carrier vehicle
- New collection system thanks to lateral bristle modules. Unlike other concepts, we collect BEFORE sweeping UNDER the broom. This allows us to avoid the undesired effect of lightly "running through" the sweeping material.

## POSSIBLE AREAS OF APPLICATION

**Agriculture**

**Construction**

**Recycling**

**Logistics**

**Industry**

**Biogas**

**Horse riding facilities**

Agricultural: sweeping and pushing on different surfaces and sweeping materials  
Pushing and cleaning at the feed table in one operation

Construction: sweeping construction sites, spreading sand and gravel, sand back-filling without generating dust and damaging the subsoil

Recycling: Clean premises of metal and dirt, pile up metal residues and clean spaces between containers

Logistics and industry: cleaning halls with fine dust bristles, pushing coarse materials, clearing yard areas of snow and dirt

Biogas: quick set-up time, cleaning large areas quickly, thoroughly and powerfully

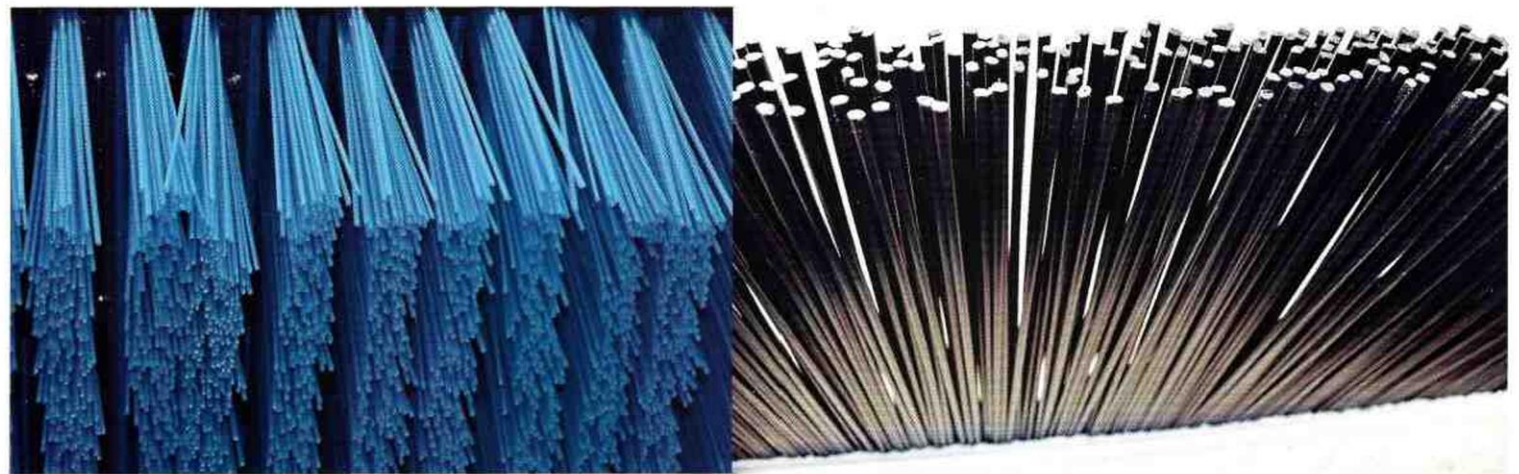

Riding facilities: professional, cost-efficient cleaning of paddocks and yard areas of horse droppings, hay and straw

Qualität made in Germany

# KehrMuli Bristles made in Germany

- Blue bristles: lower degree of hardness
- Black bristles: Scraping bristles, greater hardness
- NEW!: Fine dust bristles for use in halls
- Excellent rigidity and strength
- Very low water absorption (material does not swell up)
- Excellent resistance against heat distortion
- Maximum service life (best abrasion values – resulting in minimal abrasion)
- Excellent chemical resistance (also against solvents)
- Tendency to avoid stress cracking
- Only with us: a combination with PP and steel bristles!
- Fast deliveries in just a short period

**FarmMuli**  
Qualität made in Germany

"The results are impressive!"

Sweeping away snow and removing slush without damaging the surface is easy with the KehrMuli, or in combination with the FarmMuli for even larger quantities of snow!

# Push broom – best quality

We have optimised each and every factor which influences sweeping results.

All components are designed to have a long service life:

**KehrMuli**  
Qualität made in Germany

**FarmMuli**  
Qualität made in Germany

All parts fully galvanised and passivated ✓

Brushing and sweeping in a single operation ✓

Reinforcing elements and shape optimisation ✓

Combined application ✓

Original KehrMuli supreme bristles  
Abrasion-resistant  
Different degrees of hardness  
Tightly pressed  
Spacing optimisation of bristle rows  
Avoids penetration and snagging of light sweeping materials, such as straw, hay and silage ✓

Application-oriented equipment thanks to...  
...tailor-made mounts  
... variety of bristle properties ✓

Optimal sweeping results ✓

You can only obtain this protected combination technique from us.

The future belongs to KehrMuli, because it ensures the best possible sweeping results on any terrain, farm and business premises while also working in an environmentally-friendly and cost-effective manner. Dust build-up during the sweeping process is significantly lower than with rotating systems. This means it protects both people and the environment.
